Tested by: Dave Hewitt & Simon Clarke

Prepared by: Simon Clarke **Reviewed by:** Simon Clarke

Outlet covers

Applicable standard: AS 1926.3 Clause 6.2

The following requirements apply:

- (a) Outlet covers shall be tested in accordance with Appendix A by an accredited testing laboratory (Clause 3.1).
- (b) Outlet covers that are certified as having been tested and marked in accordance with ASME A112.19.8 shall be deemed to comply under this Standard and not be subject to the testing and approval procedure in Appendix A.
- (c) Outlet covers shall be permanently marked with—(i) the minimum nominal pipe diameter, in millimetres, to which it can be fitted;
 - (ii) the maximum allowable flow rate, in litres per minute (L/min) (see item (d)); and
 - (iii) the testing authority test number and date of test.
- (d) The maximum allowable flow rate (see item (c)(ii)) shall be 80% of the lesser of the flow rates determined in the tests in Paragraphs A5.1 and A5.2.
- (e) Outlet covers shall be installed on outlet points in a manner that prevents their removal without the use of tools.

- a) License No. 14783
- b) Not marked as complying to ASME A112.19.8.
- c) This requirement is not applicable at time of testing.
- d) See test data in this Report.
- e) Tools are required for removal after installation.

Sampling

Applicable standard: AS 1926.3 Appendix A4

Criteria	Sampling
The outlet cover manufacturer shall supply the	Client has supplied 10 samples and three Test
accredited testing laboratory (see Clause 3.1) with 10	Specimens were selected randomly for testing and
samples of each cover to be tested from which the	reported as 1, 2 and 3.
laboratory shall select three at random to be tested.	

Hair entrapment test

Applicable standard: AS 1926.3 Appendix A

Test Method: Appendix A5.1

eria

The force required to remove the hair shall not exceed 20 N.

The flow rate at which the hair can be removed with 20 N or less, shall be the maximum flow rating for the outlet cover

outlet cover

Body entrapment test

Applicable standard: AS 1926.3 Appendix A

Test Method: Appendix A5.2

· ·	
`r1f	eria

The force required to remove the body blocking element when pulling perpendicular to the wall or floor surface shall not exceed 50 N.

Test Requirements	Test Conditions
Withdraw – Perpendicular	Withdraw – Perpendicular
Initial loading = 250 N	Rated flow ^{#1} = 240 L/min
Force to withdraw = 50 N Max.	Applied Force to suction cover $(N) = 250$
Body blocking element to Figure A6 with weight	Applied Force to suction cover $(kg) = 25.48$
adjusted to neutral buoyancy before adding applied	
force.	

Test Data for flow with removal at Rated Flow				
Test Specimen	Rated flow ^{#1}	Total Force	Removal	Force
	(L/min)	(kg)	Force	(N)
			(kg)

Structural integrity test

Applicable standard: AS 1926.3 Appendix A

Test Method: Appendix A5.4

Criteria

A5.4.2.2 Pressure tests

When tested the outlet cover shall show no sign of permanent deformation or cracks and no loss of material exclusive of plating or finish.

Test Requirements	Test Conditions	Observation
Temperature = Ambient	Temperature ($^{\circ}$ C) = 20	No sign of permanent
Pressure = 150 kPa	Pressure $(kPa) = 150$	deformation or cracks and no
Duration = 24 Hours	Duration (Hours) = 24	loss of material.

A5.4.3 Shear test

At completion of the test, the outlet cover is inspected, and shall show no sign of permanent deformation or cracks, and no loss of material exclusive of plating or finish

Test Requirements	Test Conditions	Observation
Temperature = Ambient	Temperature ($^{\circ}$ C) = 20	No sign of permanent
Force = 500 N	Force $(N) = 500$	deformation or cracks, and no
Duration = 2 minutes	Duration $(min) = 2$	loss of material.

Summary of data

Applicable standard: AS 1926.3 Appendix A6

COMPLIES

Test requirement	Observation
The water flow rate at which the hair sample could be removed from the	Flow rate (L/min) = 240
outlet cover with a force 20 N or less.	
The force required to remove the body blocking element at the flow rate	Force $(N) = 16$
recorded in Item (a) above	
If the recorded force in Item (b) above is greater than 50 N then the reduced	Not required
flow rate at which the force required was 50 N or less.	
Where the outlet cover opening size was such that the physical entrapment	Not applicable opening is less
test was undertaken, the force applied to remove the test object from the cover	than 8 mm
openings.	
Whether or not the outlet cover passed the structural integrity tests and, if not,	Meets acceptance criteria
then details of its failings.	

Maximum allowable flow rate

Applicable standard: AS 1926.3 Clause $6.2\ c$, d and e

Requirement	Observation
Test Number	QTL 112131 2646
Date of Test	20/05/2011
Pipe sizing used in testing	40 mm (DN40)
The maximum allowable flow rate shall be 80% of the lesser of	400 7 / 1
the flow rates determined in the tests in Paragraphs A5.1 and	192 L/min
A5.2.	

Related models

Applicable standard: AS 1926.3

A range of models manufactured by the same manufacturer of the same brand which will have the same performance requirements and physical characteristics relevant to maximum allowable flow, design and structural integrity.

For example an outlet cover with a variety of colours or finishes or different end connection types.

Model Number	Description	Notes
453494	Suction 40 mm Slip fit (Black)	Equivalent to white fitting
453496	Suction 40 mm Slip fit (White)	Equivalent to white fitting
4534980	Suction 40 mm Threaded (Black)	Equivalent to white fitting
